Papers in abstracted/indexed journals

- [1] R. Kovács, M. Valiskó, and D. Boda. Monte Carlo simulation of the electrical properties of electrolytes adsorbed in charged slit-systems. *Cond. Matt. Phys.*, 15(2):23803, 2012. IF: 0.800.
- [2] D. Boda and D. Gillespie. Steady state electrodiffusion from the Nernst-Planck equation coupled to Local Equilibrium Monte Carlo simulations. *J. Chem. Theor. Comput.*, 8(3):824–829, 2012. IF: 5.629.
- [3] É. Csányi, D. Boda, D. Gillespie, and T. Kristóf. Current and selectivity in a model sodium channel under physiological conditions: Dynamic Monte Carlo simulations. *Biochim. et Biophys. Acta - Biomembranes*, 1818(3):592–600, 2012. IF: 4.102.
- [4] T. Nagy, D. Henderson, and D. Boda. Simulation of an electrical double layer model with a low dielectric layer between the electrode and the electrolyte. *J. Phys. Chem. B*, 115(39):11409–11419, 2011. IF: 3.603. #Refs = 1.
- [5] D. Boda, D. Henderson, B. Eisenberg, and D. Gillespie. A method for treating the passage of a charged hard sphere ion as it passes through a sharp dielectric boundary. *J. Chem. Phys.*, 135(6):064105, 2011. IF: 2.920.
- [6] T. Nagy, M. Valiskó, D. Henderson, and D. Boda. The Behavior of 2:1 and 3:1 Electrolytes at Polarizable Interfaces. *J. Chem. Eng. Data*, 56(4):1316–1322, 2011. IF: 2.089.
- [7] D. Henderson and D. Boda. Mean spherical approximation for the Yukawa fluid radial distribution function. *Mol. Phys.*, 109(7–10):1009–1013, 2011. IF: 1.743. #Refs = 1.
- [8] J. Vincze, M. Valiskó, and D. Boda. Response to “Comment on ‘The nonmonotonic concentration dependence of the mean activity coefficient of electrolytes is a result of a balance between solvation and ion-ion correlations’ [J. Chem. Phys. 134, 157101 (2011)]”. *J. Chem. Phys.*, 134(15):157102, 2011. IF: 2.920.
- [9] Z. Máté, I. Szalai, D. Boda, and D. Henderson. Heat capacities of the dipolar Yukawa model polar fluid. *Mol. Phys.*, 109(2):203–208, 2011. IF: 1.743. #Refs = 2.
- [10] D. Boda, J. Giri, D. Henderson, B. Eisenberg, and D. Gillespie. Analyzing the components of the free energy landscape in a calcium selective ion channel by Widom’s particle insertion method. *J. Chem. Phys.*, 134(5):055102, 2011. IF: 2.920. #Refs = 1.
- [11] J. Giri, J. Fonseca, D. Boda, D. Henderson, and B. Eisenberg. Self-organized models of selectivity in calcium channels. *Phys. Biol.*, 8(2):026004, 2011. IF: 3.109.
- [12] J. Vincze, M. Valiskó, and D. Boda. The nonmonotonic concentration dependence of the mean activity coefficient of electrolytes is a result of a balance between solvation and ion-ion correlations. *J. Chem. Phys.*, 133(15):154507, 2010. IF: 2.920. #Refs = 10.

- [13] M. Malasics, D. Boda, M. Valiskó, D. Henderson, and D. Gillespie. Simulations of calcium channel block by trivalent ions: Gd^{3+} competes with permeant ions for the selectivity filter. *Biochim. et Biophys. Acta - Biomembranes*, 1798(11):2013–2021, 2010. IF: 4.647.
- [14] G. Rutkai, D. Boda, and T. Kristóf. Relating binding affinity to dynamical selectivity from dynamic Monte Carlo simulations of a model calcium channel. *J. Phys. Chem. Lett.*, 1(14):2179–2184, 2010. IF: -. #Refs = 2.
- [15] A. Malasics and D. Boda. An efficient iterative grand canonical Monte Carlo algorithm to determine individual ionic chemical potentials in electrolytes. *J. Chem. Phys.*, 132(24):244103, 2010. IF: 2.920. #Refs = 2.
- [16] M. Valiskó, T. Varga, A. Baczoni, and D. Boda. The structure of strongly dipolar hard sphere fluids with extended dipoles by Monte Carlo simulations. *Mol. Phys.*, 108(1):87–96, 2010. IF: 1.743. #Refs = 1.
- [17] A. Malasics, D. Gillespie, W. Nonner, D. Henderson, B. Eisenberg, and D. Boda. Protein structure and ionic selectivity in calcium channels: Selectivity filter size, not shape, matters. *Biochim. et Biophys. Acta - Biomembranes*, 1788(12):2471–2480, 2009. IF: 3.998. #Refs = 1.
- [18] M. Valiskó and D. Boda. Correction to the Clausius-Mosotti equation: the dielectric constant of non-polar fluids from Monte Carlo simulations. *J. Chem. Phys.*, 131(16):064120, 2009. IF: 3.093. #Refs = 1.
- [19] D. Boda, M. Valiskó, D. Henderson, B. Eisenberg, D. Gillespie, and W. Nonner. Ion selectivity in L-type calcium channels by electrostatics and hard-core repulsion. *J. Gen. Physiol.*, 133(5):497–509, 2009. IF: 4.260. #Refs = 6.
- [20] Y. He, D. Gillespie, D. Boda, I. Vlassiuk, R. S. Eisenberg, and Z. S. Siwy. Tuning transport properties of nanofluidic devices with local charge inversion. *JACS*, 131(14):5194–5202, 2009. IF: 8.580. #Refs = 31.
- [21] D. Henderson and D. Boda. Insights from theory and simulation on the electrical double layer. *Phys. Chem. Chem. Phys.*, 11(20):3822–3830, 2009. IF: 4.116. #Refs = 21.
- [22] D. Boda, M. Valiskó, D. Henderson, D. Gillespie, B. Eisenberg, and M. K. Gilson. Ions and inhibitors in the binding site of HIV Protease: Comparison of Monte Carlo simulations and the linearized Poisson-Boltzmann theory. *Biophys. J.*, 96(4):1293–1306, 2009. IF: 4.390. #Refs = 2.
- [23] D. Boda and D. Henderson. The effects of deviations from Lorentz-Berthelot rules on the properties of a simple mixture. *Mol. Phys.*, 106(20):2367–2370, 2008. IF: 1.478. #Refs = 6.
- [24] D. Gillespie and D. Boda. The anomalous mole fraction effect in calcium channels: A measure of preferential selectivity. *Biophys. J.*, 95(6):2658–2672, 2008. IF: 4.683. #Refs = 9.
- [25] D. Gillespie, D. Boda, Y. He, P. Apel, and Z.S. Siwy. Synthetic nanopores as a test case for ion channel theories: The anomalous mole fraction effect without single filing. *Biophys. J.*, 95(2):609–619, 2008. IF: 4.683. #Refs = 15.
- [26] A. Malasics, D. Gillespie, and D. Boda. Simulating prescribed particle densities in the grand canonical ensemble using iterative algorithms. *J. Chem. Phys.*, 128(12):124102, 2008. IF: 3.149. #Refs = 12.
- [27] D. Boda, W. Nonner, D. Henderson, B. Eisenberg, and D. D. Gillespie. Volume exclusion in calcium selective channels. *Biophys. J.*, 94(9):3486–3496, 2008. IF: 4.683. #Refs = 7.
- [28] D. Di Caprio, M. Valiskó, M. Holovko, and D. Boda. Simple extension of a field theory approach for the description of the double layer accounting for excluded volume effects. *J. Phys. Chem. C*, 111(43):15700–15705, 2007. IF: -. #Refs = 2.

- [29] M. Valiskó, D. Boda, and D. Gillespie. Selective adsorption of ions with different diameter and valence at highly-charged interfaces. *J. Phys. Chem. C*, 111(43):15575–15585, 2007. IF: -. #Refs = 24.
- [30] D. Boda, W. Nonner, M. Valiskó, D. Henderson, B. Eisenberg, and D. Gillespie. Steric selectivity in Na channels arising from protein polarization and mobile side chains. *Biophys. J*, 93(6):1960–1980, 2007. IF: 4.627. #Refs = 28.
- [31] D. Boda, M. Valiskó, B. Eisenberg, W. Nonner, D. Henderson, and D. Gillespie. Combined effect of pore radius and protein dielectric coefficient on the selectivity of a calcium channel. *Phys. Rev. Lett.*, 98(16):168102, 2007. IF: 6.944. #Refs = 15.
- [32] M. Valiskó, D. Henderson, and D. Boda. The capacitance of the electrical double layer of valence-asymmetric salts at low reduced temperatures. *J. Mol. Liquids*, 131–132:179–184, 2007. IF: 0.982. #Refs = 9.
- [33] D. Di Caprio, M. Valiskó, M. Holovko, and D. Boda. Anomalous temperature dependence of the differential capacitance in valence asymmetric electrolytes. Comparison of Monte Carlo simulation results and the field theoretical approach. *Mol. Phys.*, 104(22-24):3777–3786, 2006. IF: 1.690. #Refs = 7.
- [34] A. Malasics, D. Boda, and M. Valiskó. Monte Carlo simulation and renormalized perturbation theory study of the dielectric properties of mixtures of polarizable hard spheres and polarizable dipolar hard spheres. *Mol. Phys.*, 104(22-24):3821–3830, 2006. IF: 1.690. #Refs = 1.
- [35] D. Boda, M. Valiskó, B. Eisenberg, W. Nonner, D. Henderson, and D. Gillespie. The effect of protein dielectric coefficient on the ionic selectivity of a calcium channel. *J. Chem. Phys.*, 125(3):034901, 2006. IF: 3.166. #Refs = 14.

Papers in miscellaneous journals

- [93] D. Boda. *Tudományos előadások 2005*, chapter Ioncsatornák szelektivitásának Monte Carlo szimulációs vizsgálata, pages 105–117. MTA Veszprémi Területi Bizottságának kiadványa, 2005.
- [94] D. Henderson, D. Boda, and D. Gillespie. Computer Simulation of Ions in Inhomogeneous Dielectric Materials. In *2001 International Conference on MEMS, NANO and Smart Systems (ICMENS 2004), Banff, Alberta, Canada, 5-27 August 2004, Proceedings*, pages 179–180, Los Alamitos, California, 2004. IEEE.
- [95] M. Valiskó, D. Boda, J. Liszi, and I. Szalai. Dipoláris folyadékok és folyadékegyek relatív permittivitása. Elméleti és kísérleti eredmények összehasonlítása. *Magyar Kémiai Folyóirat*, 108:517–523, 2002.
- [96] T. A. van der Straaten, Z. Kuang, G. Kathawala, D. Boda, D. P. Chen, U. Ravaioli, B. Eisenberg, and D. Henderson. Equilibrium Structure of Electrolyte calculated using Equilibrium Monte Carlo, Molecular Dynamics, and Boltzmann Transport Monte Carlo Simulations. In *Technical Proceedings of the 2003 International Conference on the Computational Nanoscience, February 23-27, 2003, San Francisco, USA*.
- [97] D. Henderson, D. D. Busath, R. L. Rowley, P. S. Crozier, and D. Boda. Simulation Study of Channels in Biological Membranes. In *Technical Proceedings of the 2001 International Conference on the Computational Nanoscience, March 19-21, 2001, Hilton Head Island, USA*.
- [98] D. Henderson and D. Boda. Anomalies in the Properties of the Electrochemical Double Layer for Strong Ionic Coupling. In Garrido P. L. and J. Marro, editors, *Modeling Complex Systems: 6th Granada Lectures on Computational Physics, Granada, Spain, 4-10 September 2000, AIP Conference Proceedings*, volume 547, pages 222–225, New York, 2001. Melville.
- [99] D. Boda and D. Henderson. *Annales Universitatis Marie Curie-Skłodowska*, chapter Theory and simulation of the electrical double layer, pages 171–186. Lublin - Polonia, 1999/2000.

Chapter in book

- [100] D. Boda, D. Gillespie, B. Eisenberg, W. Nonner, and D. Henderson. *Ionic Soft Matter: Novel Trends in Theory and Applications*, volume 206 of *NATO Science Series: II: Mathematics, Physics and Chemistry*, chapter The Induced Charge Computation Method and its Application in Monte Carlo Simulations of Inhomogeneous Dielectric Systems, pages 19–44. Springer, Dordrecht, The Netherlands, 2005.
